

A HUNGARIAN WINERY

Google Ads & Meta performance, May–July 2026

What this report covers

01

Google Ads performance

Campaign results, search behavior, audience, and the conversion tracking gap.

02

Meta Ads performance

Four ads compared on cost, results, reach, and creative fatigue.

03

Understanding the metrics

What each number means, why we track it, and which KPIs matter on each platform.

04

Recommended next steps

A single prioritized action plan across both channels.

Executive summary

GOOGLE ADS

149,000 Ft

2,100 clicks · 15,000 impressions

META ADS

413,023 Ft

18,898 landing page views · 431,214 reach

- Google Ads captures active search intent; Meta builds broader awareness and drives landing-page traffic at scale – the two channels play different, complementary roles.
- The Wine Shop campaign on Google and the summer accommodation ad on Meta are both clear standouts, each performing well above their platform average.
- The most urgent fix sits on Google Ads: conversion tracking needs to be set up so bookings – not just clicks – can be measured.

GOOGLE ADS

Search campaigns, May 1 – July 1, 2026

Performance at a glance

2,100

Clicks

15,000

Impressions

71 Ft

Average CPC

149,000

Ft

Total spend

≈**14%** of every 100 ad impressions turned into a click – a strong, well-targeted ratio.

Campaign breakdown

Campaign	Spend	Clicks	CTR	Opt. score
Wine Shop	50,009 Ft	1,202	25.71%	72%
Accommodation	49,845 Ft	460	10.03%	61.1%
Restaurant	49,311 Ft	439	7.60%	69.6%

Wine Shop – more than double the clicks of the others at similar spend; sharp, well-matched targeting.

Accommodation – stable CTR, but the lowest optimization score signals room to refine keywords and ad copy.

Restaurant – weakest CTR of the three, but the biggest period-over-period gain – see next.

Growth versus the previous period

May 1 – Jul 1, 2026 compared with Feb 28 – Apr 30, 2026

+181% clicks

Restaurant

+34% clicks

Wine Shop

Both campaigns produced significantly more clicks on a near-identical budget – a combination of seasonality and ongoing campaign refinement.

Who they are, and how they search

TOP SEARCH TERMS

The brand name leads by a wide margin, including misspellings and dropped accents. Szigliget, Badacsony, and the Balaton Uplands drive the geographic long tail.

AGE

GENDER

The core audience sits between 25 and 54 – expected for a winery, restaurant, and boutique stay.

When and where the clicks happen

DEVICE

Mobile carries most traffic – people search for restaurants and stays while out and about.

TIMING

Impressions peak Friday–Sunday, strongest 10:00–15:00 with a midday peak – weekend planning and lunchtime browsing.

The conversion tracking gap

0.00

conversions recorded
on every search term, two months straight

This does not necessarily mean no bookings happened. It's far more likely that conversion tracking isn't correctly set up – so the system can't see what happens on the website after a click.

Without it, true campaign return can't be measured, and Google Ads can't optimize toward actual bookings.

META ADS

Four ads, May–June 2026

Performance at a glance

413,023
Ft

Total spend

18,898

Landing page views

22 Ft

Avg. cost / result

431,214

Reach

2.4% weighted average link CTR across all four ads – a solid, consistent creative-to-audience match.

Ad breakdown

Ad	Spend	Results	Cost/result	Link CTR	Frequency
Accommodation / Spring	58,644 Ft	2,935	20 Ft	2.4%	1.53x
Restaurant / May	91,257 Ft	3,657	25 Ft	2.2%	2.54x
Restaurant / June	100,000 Ft	4,058	25 Ft	2.3%	2.51x
Accommodation / Summer	163,122 Ft	8,248	20 Ft	2.6%	2.10x

RESULT = LANDING PAGE VIEW
SOURCE: META ADS EXPORT

Landing page views by ad

The summer accommodation ad alone accounts for 43.6% of all results – the largest reach in the set without sacrificing cost efficiency.

What's working, what needs work

Keep doing

The accommodation theme performs best on both ads: the summer version is the clear benchmark, and the low-frequency spring version shows there's still headroom to scale before the audience saturates.

Running several accommodation creatives in parallel – room, panorama, winery experience, relaxation – would build on that strength.

Improve

Both restaurant ads cost more per result and show rising frequency without a matching CTR gain – a sign of creative fatigue rather than a weak audience.

Opening-hours messaging alone isn't pulling its weight; a stronger hook – terrace, weekend lunch, wine dinner – paired with a retargeting ad for past clickers should help.

Decision rule Cheap result + high CTR → scale it. Result getting pricier, CTR falling, or frequency climbing → refresh the creative or the offer.

UNDERSTANDING THE METRICS

What each number means, and which KPIs to track going forward

Google Ads metrics, explained

Impressions

How many times the ad was shown. Indicates how much visibility the targeting and budget are buying – too low often means budget or targeting is too narrow.

CTR (click-through rate)

$\text{Clicks} \div \text{impressions}$. Shows how compelling the ad copy and keyword match are – a strong signal of relevance before anyone lands on the site.

Average CPC

The average price paid per click. Reflects keyword competition; only tells the full efficiency story once paired with what happens after the click.

Optimization score

Google's own health check on account setup (0–100%). Not a performance result – a signal of how much room is left in keywords, bids, and ad assets.

Meta metrics, explained

Cost per result

$\text{Spend} \div \text{results (here, landing page views)}$. Lower means cheaper traffic; it's what makes ads with different budgets directly comparable.

Link CTR

$\text{Link clicks} \div \text{impressions}$. Measures how much the creative, copy, and offer made someone want to leave the feed and visit the site.

Frequency

$\text{Impressions} \div \text{reach}$ – how many times an average person saw the ad. Rising frequency with flat CTR is the earliest sign of creative fatigue.

Reach

The number of unique people or accounts shown the ad at least once. Shows the scale of a campaign before judging its results or cost.

Recommended KPIs – Google Ads

AWARENESS	Impressions	Tracks whether the campaign is reaching enough of the intended audience.
CONSIDERATION	CTR & Avg. CPC	Shows how relevant the ads are and what each click costs to earn.
CONVERSION	Conversion rate & CPA	The metrics that matter most for ROI – unlockable once tracking is fixed.
ACCOUNT HEALTH	Optimization score	A quick monthly check that setup, bids, and assets are still well-tuned.

NEEDS TRACKING FIX

Recommended KPIs – Meta Ads

AWARENESS	Reach	The scale of unique people the budget is putting the brand in front of.
GUARDRAIL	Frequency	Not a goal to maximize — a warning sign to watch alongside CTR.
CONSIDERATION	Link CTR	The clearest read on whether the creative and offer are landing.
EFFICIENCY	Cost per result	The bottom line for comparing ads and deciding where to put more budget.

Recommended next steps

MOST URGENT

Fix Google Ads conversion tracking

Track booking form submissions, phone clicks, and reservation clicks across all campaigns.

Scale the two winners

Increase budget on Google's Wine Shop campaign and Meta's summer accommodation ad – both show unmet demand.

Refresh restaurant creative

On Meta, pair opening-hours messaging with a stronger hook and test a retargeting ad; on Google, review keywords and ad copy for the Accommodation campaign.

Optimize for how people actually browse

Prioritize a fast, mobile-optimized landing page, and concentrate spend on weekends, 10:00–15:00, if budget is tight.

LET'S TALK ABOUT WHAT COMES NEXT.

This sample shows how HELLO reports on Google Ads and Meta performance for our clients.
